

Efficiency in Japanese Buffet

\$199 / MAN 3 HOURS

Japanese

BOSS

Buffet

After we pay the entrance fee, we need not to pay more for additional plate of sushi, so we should eat more!

After 3 hours

We are full, we can't eat more~

I need to use more effort and resources (e.g. rice, electricity, salmon fish) to produce on each additional plate of sushi.

The behaviours of  &  show they consume up to marginal benefit (MB) = \$0

The behaviour of  shows his marginal cost (MC) > \$0

As $MC > MB$, there will be a deadweight loss and become inefficient.
